

CoRoT Publication policy Additional aspects specific of the Seismology Programme -v0

Proposal to the CoRoT SC
Eric Michel, 29/11/06

In the framework of the CoRoT seismology programme, we foresee different types of publications to be associated with the following rules:

Type 1: Standard data analysis (N3 products as proposed by the DAT, see doc in min SC15: frequencies, amplitudes, widths, phases, splittings,...)

Authors: Some DAT members (who ? List ?) + Builders as defined in the List (proposed at SC21) all, with a rotation in the order tbd...

Type 2: Modeling and interpretation works + specific (non-standard) data analysis:

Authors: these works are in the hands of Co-Is+teams during proprietary period (under SC supervision as defined in the Publication Policy Document)
