

IMAGETTES PIPELINE

STATUS REPORT

R. Cautain & L. Jorda – LAM Marseille

R. Den Hartog – ESTEC (now at SRON)

ACTIVITIES SINCE LAST SC

Hard work of R. Cautain:

- **Debug outputs to trace S/N variations inside the pipeline**
- **Detailed code analysis to trace problems and/or bugs**
 - **Lengthy process**
- **Correction of problems and bugs: see next slides**

CORRECTED PROBLEMS

(in addition to those listed at the last SC)

- **Incorrect mask calculation (pb with BG subtraction):**
 - **Masks too small → Lower flux + higher noise**
- **Large jitter variations:**
 - **Outliers in the lightcurve**
- **Incorrect BG subtraction option:**
 - **Lower flux + higher noise**

(all CVS committed)

CORRECTED PROBLEMS

- **Calculated mask is not convex:**
 - **Higher noise (jitter)**

- **Pre-existing hot pixels detection on saturated stars (+ edges)**
 - **Higher noise due to reparation**
 - **Higher noise due to bad jitter calculation**

(not yet CVS committed)

S/N IMPROVEMENT

SRa01 : Corot ID 223955691 : V = 10.2 (19sp)

OLD

S/N IMPROVEMENT

SRa01 : Corot ID 223948833 : V = 9.8 (33ps)

OLD

NEW

PENDING PROBLEMS

- Cosmics detection & repair decreases the S/N:
 - not understood (currently under investigation)
 - Application of photometric mask decreases the S/N:
 - not understood (mask too small?)
 - Final cosmics detection doesn't work:
 - too many “cosmics” detected (bad threshold?)
- => Several corrections are still decreasing the S/N**
- Degraded duty cycle for several (bright) stars
 - not understood (bad cosmics detection?)

END

S/N TRACE
