Thematic Team on γ Doradus stars

http://www.obs-nice.fr/gdor_corot/index.html

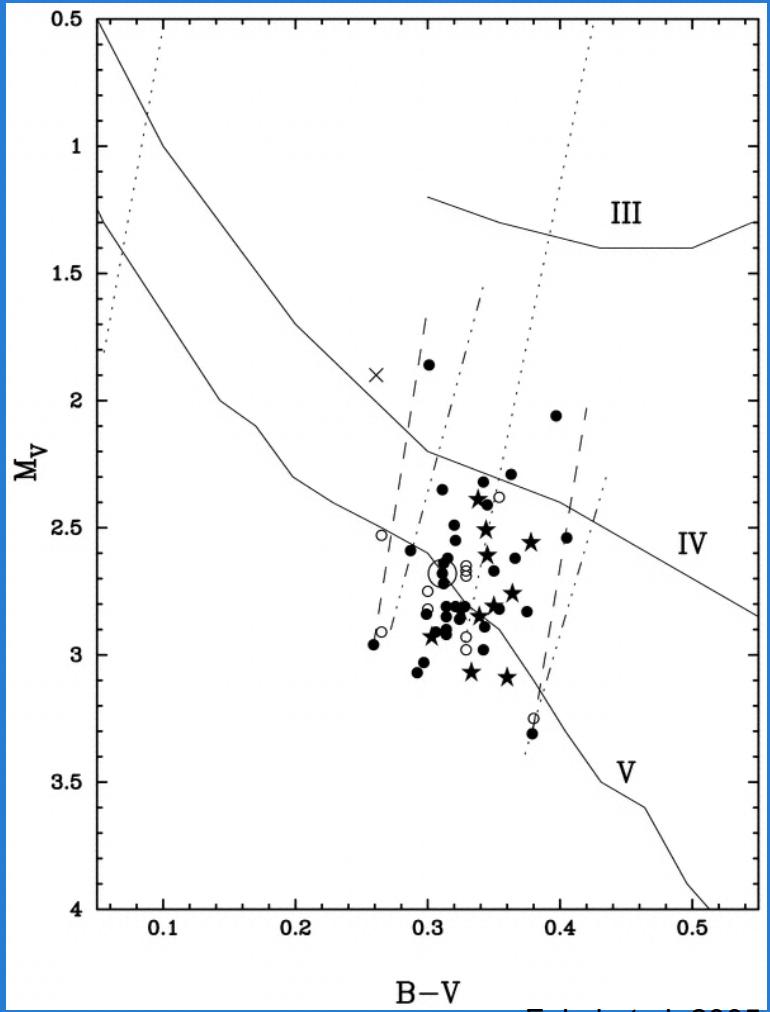

wggdor@obs-nice.fr

Conny Aerts	KU Leuven
Manuel Alvarez	UNAM, Mexico
Armando Arellano Ferro	UNAM, Mexico
Juan Antonio Belmonte	Instituto de Astrofisica de Canarias
Eric Chapellier	OCA-Gemini
Peter De Cat	Royal Observatory of Belgium
Armando Domiciano	Max Planck I f A – Bonn
Laurent Eyer	Observatoire de Genève
Slobodan Jankov	LUAN/OCA-Gemini
Rafael Garrido Haba	Instituto de Astrofisica de Andalucia
Gerald Handler	Vienna University
Danielle Le Contel	OCA-Gemini
Jean-Michel Le Contel	OCA-Gemini
Elie Matar	OCA-Gemini
Philippe Mathias	OCA-Gemini
Richard Neuteufel	Vienna University
Jose Pena	UNAM, Mexico
Ennio Poretti	Osservatorio Astronomica di Brera
Eloy Rodriguez	Instituto de Astrofisica de Andalucia
Jean-Pierre Sareyan	OCA-Gemini
Jean-Claude Valtier	OCA-Gemini
Werner Weiss	Vienna University

γ Doradus stars: generalities

- ▶ A7 -- F5
- ▶ V -- IV
- ▶ g-mode pulsators
- ▶ 54 confirmed variables
- ▶ Periods: 0.3 -- 3 days
- ▶ Amplitudes < 30mmag
- ▶ Multiperiodic
- ▶ Flux-blocking mechanism
- ▶ 50% in binary systems
- ▶ Solar metallicity

Fekel et al. 2005

Goals of the Thematic Team

➡ Characterization of γ Dor in the SISMO FoV

- Variability: spectroscopy and photometry (timescales, LPV...)
- Mode identification (moments, FDI, photometric amplitudes...)
- Abundances
- Binarity & fundamental parameters

➡ Simulation of γ Dor behaviour in the EXO FoV

- Expected variables (pulsating, geometric, cataclysmic)
- Signal determination (relative photometric precision $\sim 10^{-4}$)
- Mode identification from CDC 3-colour lightcurves

γ Doradus in SISMO FoV

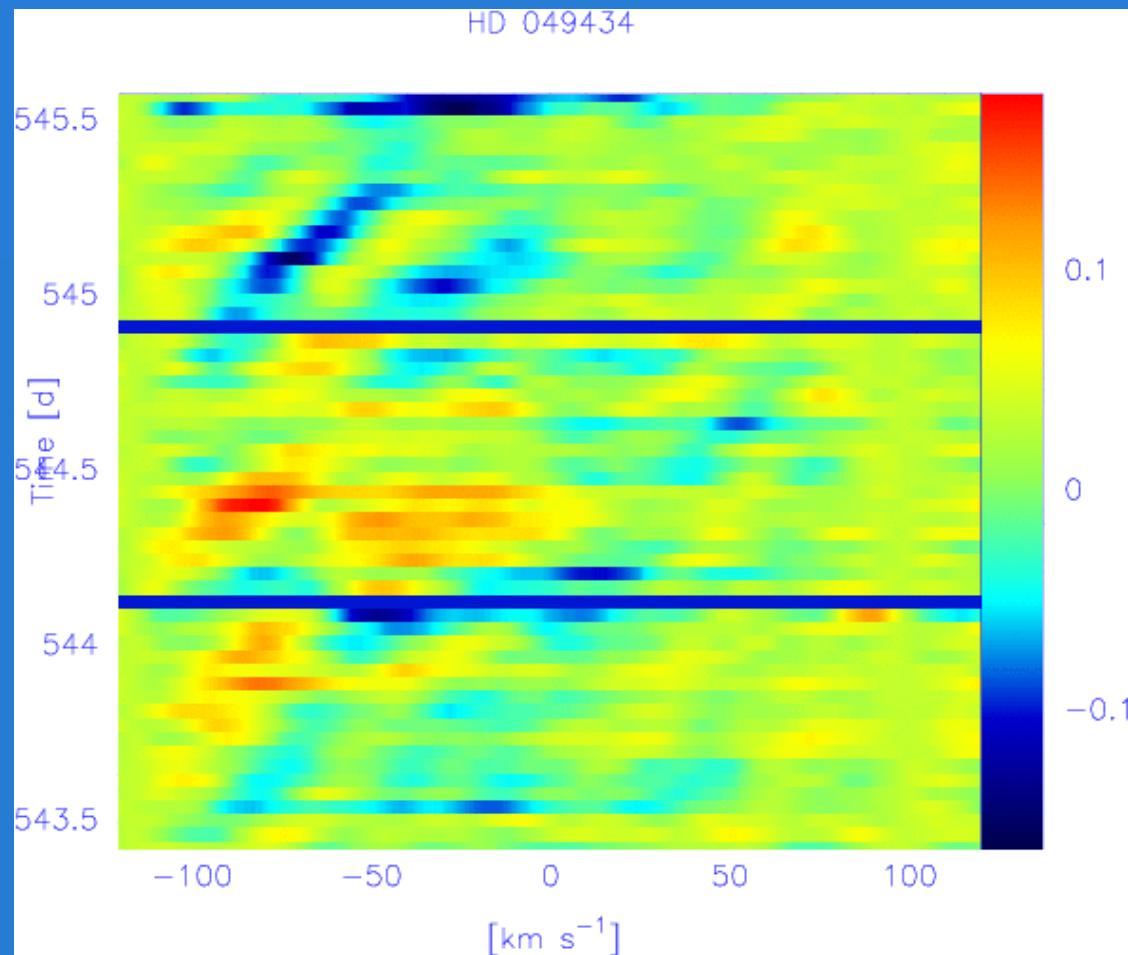

First long run (winter 2006): field of HD 49933 & HD 49434

- $v \sin i \sim 80 \text{ km s}^{-1}$
- LPV present
- No time scale determined

→ Not yet a confirmed γ Dor

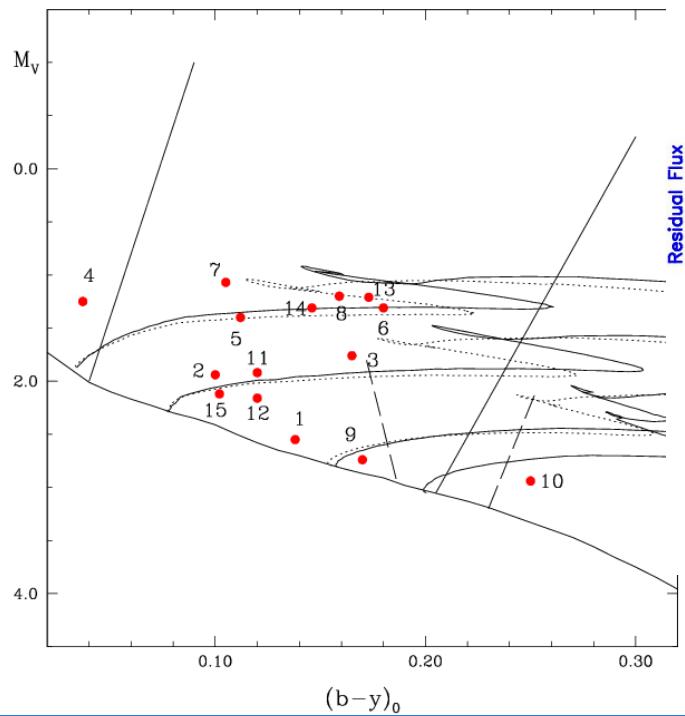

New campaign in winter 2005

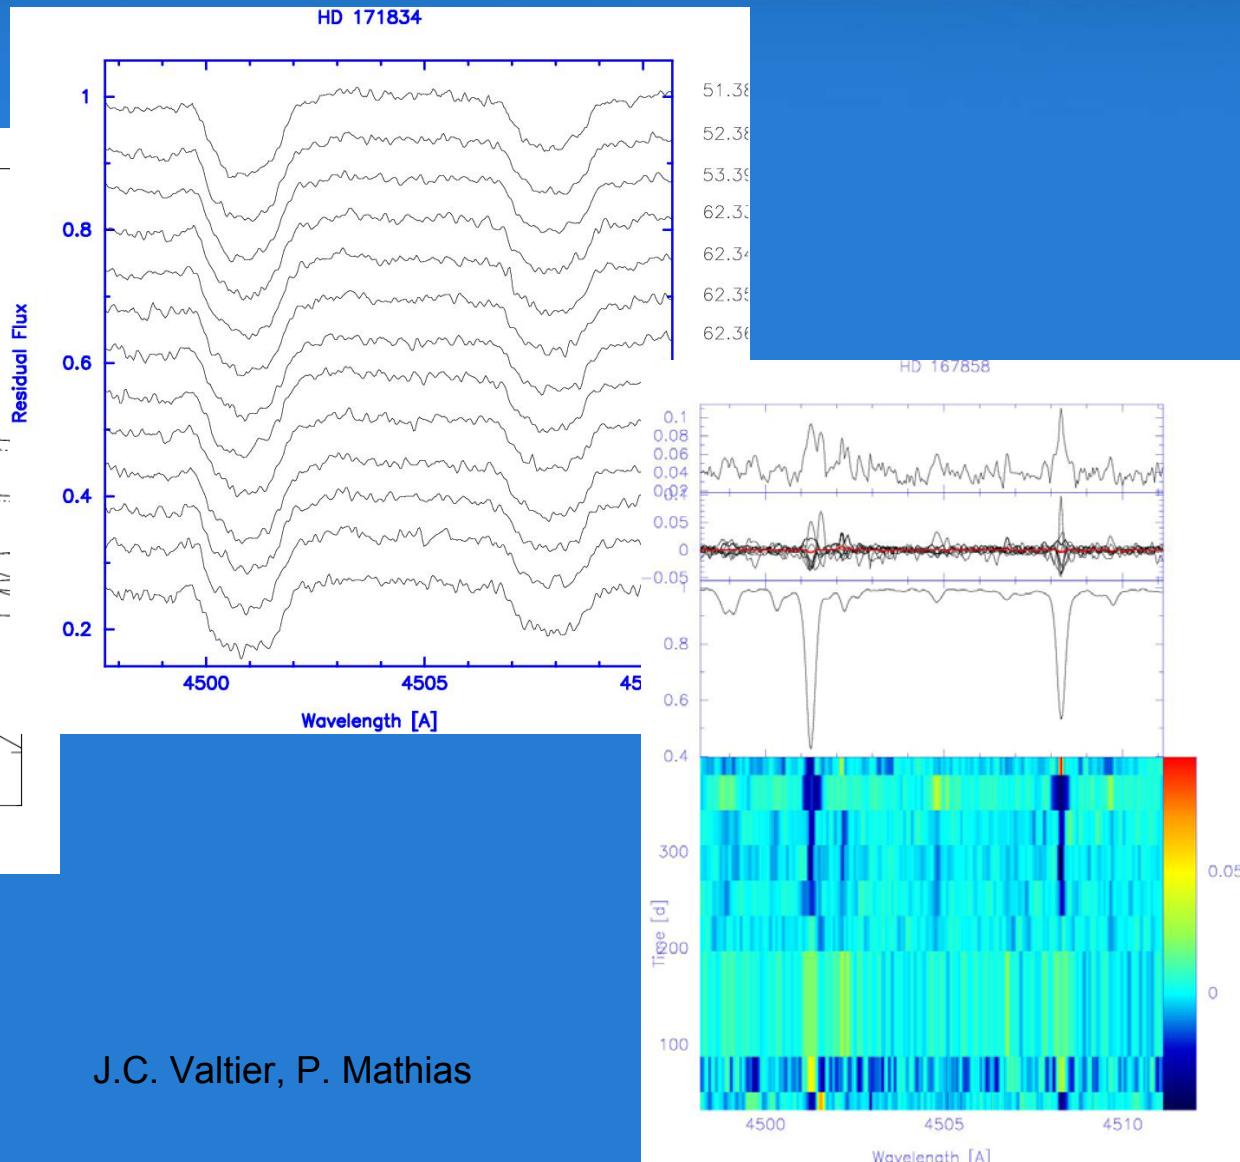

γ Dor in SISMO FoV

Poretti et al. 2005

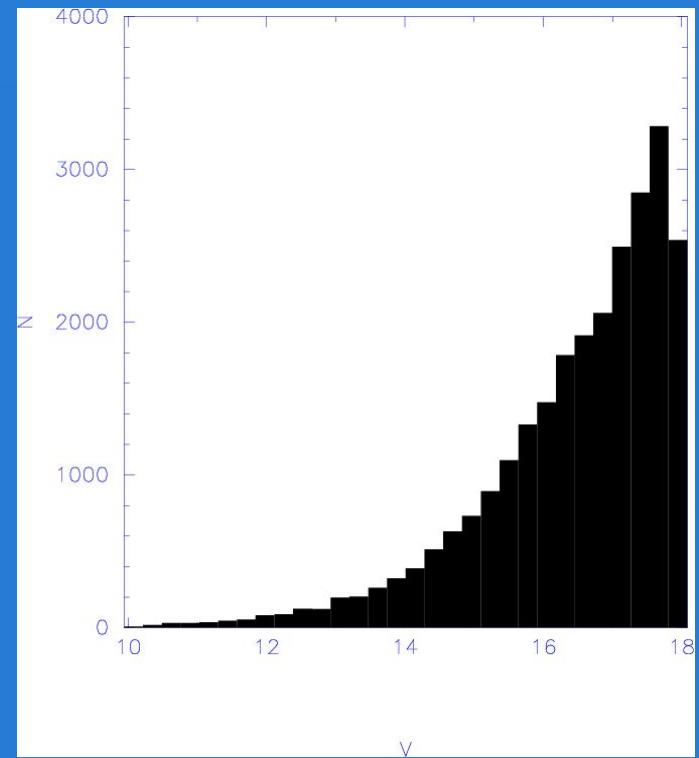

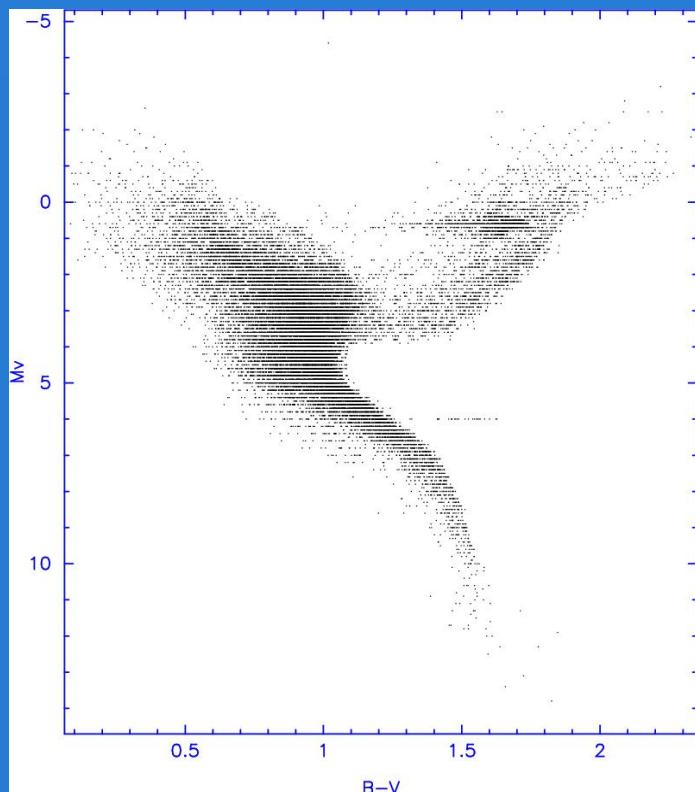

J.C. Valtier, P. Mathias

γ Dor in EXO FoV

- No candidate known → needs simulations
- Adaptation of COROTLUX (T. Guillot et al.) software for variables
- Input sample: Besançon model ~ 25000 stars

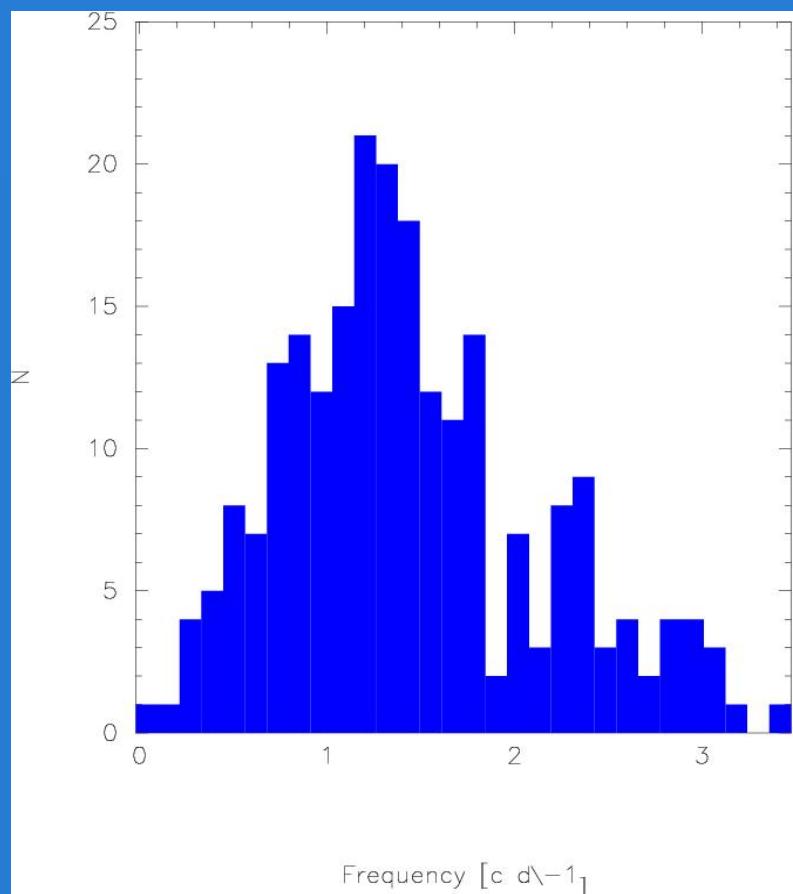

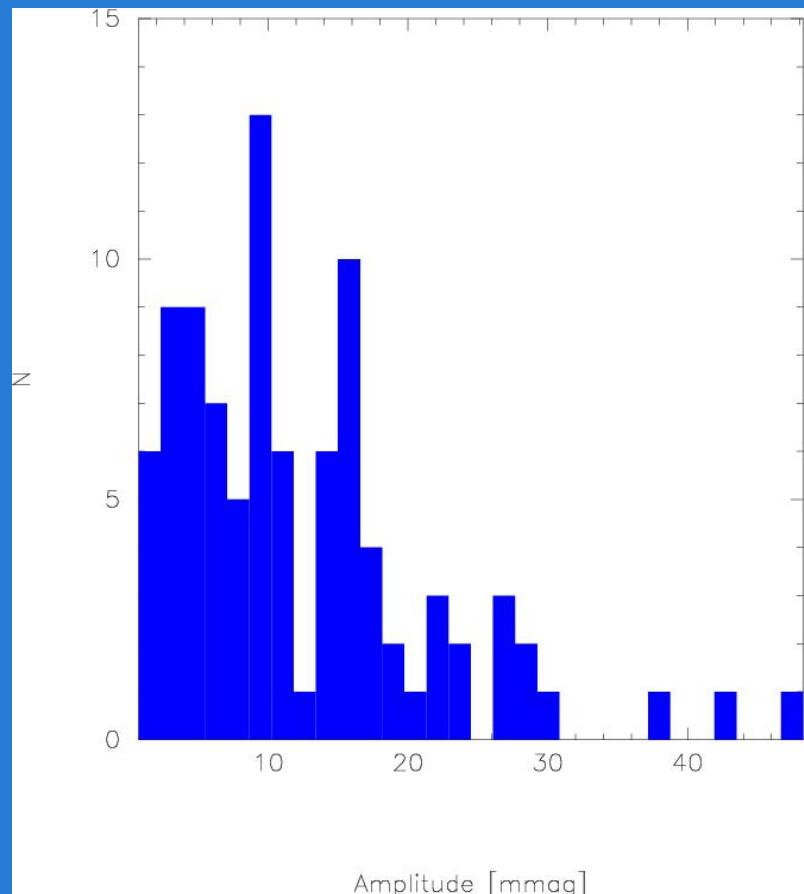

γ Dor in EXO FoV

Pulsating stars considered in EXO FoV:

β Cepheids, SPBs, δ Scuti, γ Doradus, Cepheids, Long Periods

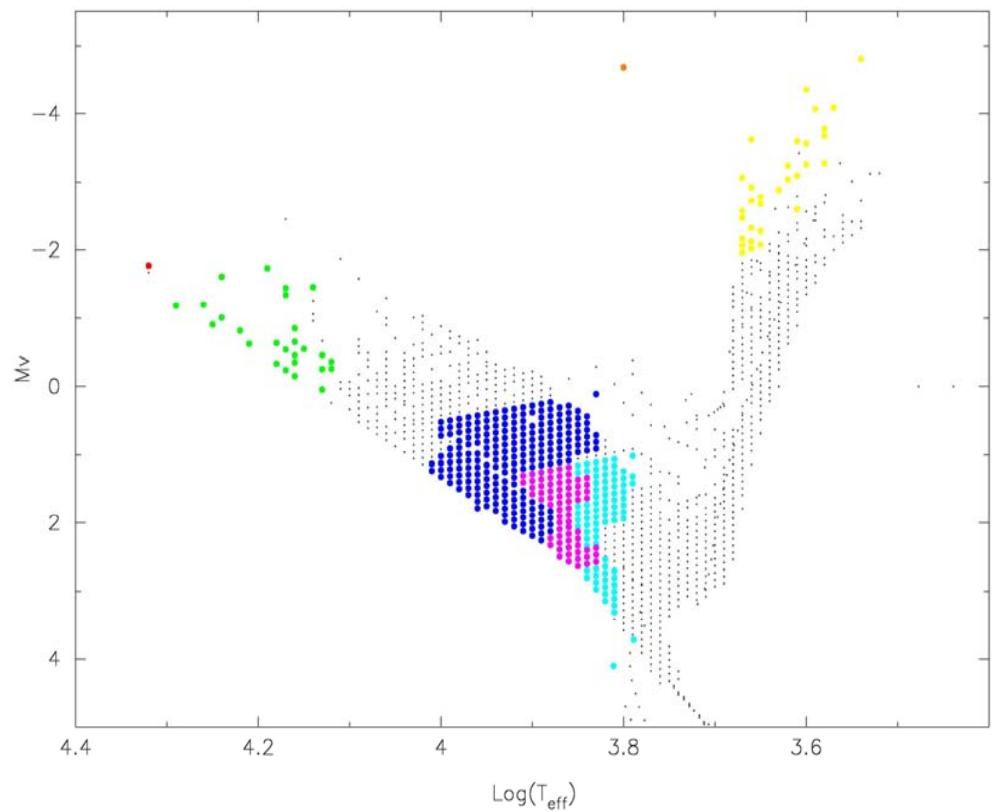

γ Dor in EXO FoV

Pulsating stars characteristics:

Class	frequencies	f [d ⁻¹]	A [mmag]
β Cepheids	[1 ; 10]	[4 - 9]	[0 ; 300]
SPBs	[1 ; 10]	[0.3 ; 3]	[0 ; 30]
δ Scuti	[1 ; 50]	[3 ; 50]	[0 ; 50]
γ Doradus	[1 ; 10]	[0.3 ; 3]	[0 ; 30]
Hybrids	[1 ; 20]	[0.3 ; 50]	[0 ; 50]
Cepheids	1	[0.01 ; 0.3]	[0 ; 1200]
Long Period	1	[0.001 ; 0.01]	[0 ; 2000]

γ Dor in EXO FoV

β Cep : 2
SPB : 29
 δ Sct : 2500
 γ Dor : 3200
Hyb : 2200
Ceph : 1
LP : 46

Fraction of variables:

■ → 30%?

General work on γ Dor

- Abundances analysis (Vienna & Mexico group): evolutionary status, metallicity
- Fundamental parameters:
 - Interferometry: binarity inclination
 - Differential interferometry:
 - ✓ Differential rotation, inclination angle
 - ✓ Stellar radius: evolutionary status
- Surveys: OHP (spectro), Mexico (photo) mainly

γ Doradus stars vs. COROT

- Any interested person is welcome to join
→ contact: mathias@obs-nice.fr
- Need more and diversified data to characterize stars
- Answer the COROT **Announcement of Opportunity** before
