

# What has already been observed ?

Some Statistics, and a few Highlights....before to-day!

A. Baglin, M. Auvergne, P. Barge,  
C. Catala, M. Deleuil, E. Michel, W. Weiss

# The focal plane

5 targets  
per CCD

$5 \leq mv \leq 9.5$

sampling 1 s  
to 32s

Seismology field  
highly defocussed

Exoplanet field  
On focus + bi-prism

6000 windows  
per CCD

$10.5 \leq R \leq 16$

sampling 8.5 min  
(32 s.)

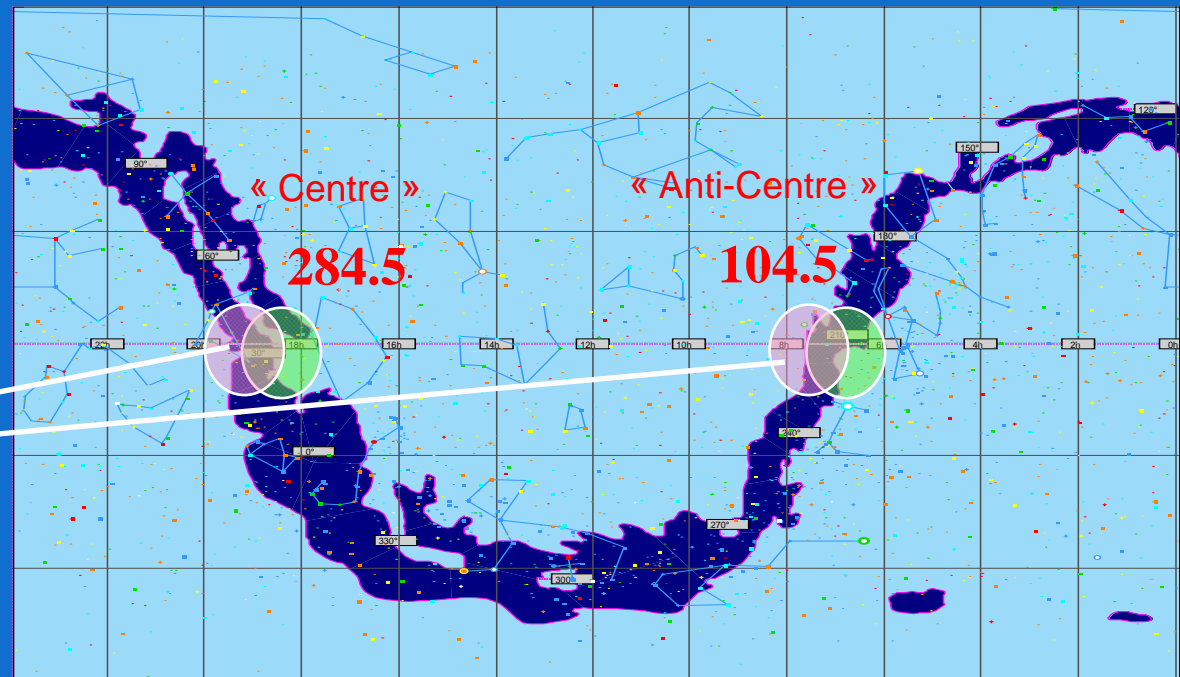

*From M. Auvergne*

# The CoRoT Eyes

The CoRoT Eyes  
Radius  $\sim 10^\circ$  ?

# The observing programme

To day : 768 days in orbit

Extension 2010.....2012?

# Data Deliveries

see PI-06, PI-07, PI-08, PI-09, PI-10

- \* To the CO-Is at CDC : IAS <http://idoc-corot.ias.u-psud.fr/>
- \* To the GIs at CDC : IAS for specific Targets of Additionnal Programmes  
Same timing except when classification needed
- \* To the Public at CDC:IAS , LAEFF, NSteD, CDS

# Seismology Targets already observed

70

12 B stars,  
1 β Cep,  
5 Be

10 giants (G,F)

7 δ Scuti,  
2 known γ Dor +1

17 A/early F stars ?  
3 Am, 7 Ap,

9 solar-like puls. cand.  
(one observed twice)

3 KM ?

# Photometric accuracy in seismology

0.5ppm in 5 days  
for bright stars mv~6

Photon noise limited  
down to mv=9  
with jitter corrections

Between 5 to 500mHz, 5 days of data
